YAU APP — FEEDBACK & CORRECTION BRIEF

Youth Athlete University | April 23, 2026

Priority Key

- **[CRITICAL]** Must be fixed
- **[HIGH]** Must be completed
- **[MEDIUM]** Important but can follow after critical items
- **[RECOMMENDATION]** My suggested additions to improve the product

---

Section 1 — Mobile App Corrections

> **IMPORTANT:** The UI delivered does not match the screen designs provided in the Google Doc. The designs shared were not guidelines — they were the reference. The app must be rebuilt to be visually consistent with those designs. This is non-negotiable.

1.1 — UI Design

[CRITICAL] Redesign app UI to match the screen mockups provided in the Google Doc under the tab called "YAU App Screens"

The current UI is not acceptable and does not reflect what was specified. Every screen must be redesigned to closely match the sample screens shared. The YAU brand colors (navy blue, red, white) and Superman shield logo must be used consistently throughout.

1.2 — Login Screen (Missing)

[CRITICAL] Login screen is completely missing — must be built immediately

There is currently no login screen in the app. This is a fundamental feature. The login screen must include:

- Email address as the username
- Password field
- Forgot Password link — sends a password reset email from the Google Workspace account (play@yausports.com)
- Admin must be able to trigger a password reset link for any member from the admin panel which should come from the workspace gmail.
- Register / New User link for first-time users

1.3 — Registration Page Fixes

[CRITICAL] Multiple issues on the registration page

The following must be corrected on the registration screen:

1. Remove the Location field entirely and we ***do not need the child Date of Birth*** — it is not needed on registration
2. Fix keyboard behavior — the keyboard must dismiss or scroll the page up when the user finishes typing in a field. Currently the keyboard covers the form fields
3. Grade selection must be renamed to 'Select Grade Band' with these four options only:

- K / 1st Grade
- 2nd / 3rd Grade
- 4th / 5th Grade
- Middle School (6th, 7th, 8th Grade)

4. Sports dropdown must include exactly these four options and allow multiple selections:

- Flag Football
- Soccer
- Cheer
- Basketball

5. Terms and Conditions must be a tappable popup link — not inline text
6. Add an SMS consent checkbox per Twilio compliance requirements:

- Checkbox must NOT be pre-checked
- Must include language: 'I agree to receive text messages from YAU. Message and data rates may apply. Reply STOP to opt out or HELP for help.'
- Privacy Policy and Terms of Use must be clickable links within the consent language.

7. Schools must populate in real time from Firestore — not hardcoded. When a new school is added in the admin panel it must appear immediately in the registration dropdown without any app update

On the registration page, we need the **phone number field to automatically format as the user types**.

Requirement:
• As the user enters numbers, the input should display like:
(202)-701-3900

Details:
• The formatting should happen in real time (input masking)
• Only allow numeric input (no letters or special characters)
• Limit to 10 digits total
• Apply formatting automatically — user should not need to type parentheses or hyphens

Important (Backend):
• Store the phone number as digits only (example: 2027013900)
• Do NOT store the formatted version in the database

1.4 — Schools Not Showing in Real Time

[CRITICAL] School dropdown is hardcoded — must be a live

This was specified in the original brief and was not implemented. The registration school dropdown must pull directly from the app_schools Firestore collection filtered to active: true. Any school added in the admin panel must appear instantly in the app. This is a hard requirement.

1.5 — Messages Screen

[HIGH] Messages screen is missing key functionality

The following must be added to the Messages screen:

1. Read receipts — when a user opens a message it must be marked as read. Unread messages should appear visually distinct (bold, colored indicator)
2. Unread badge — the Messages tab icon must show a red circle badge with the count of unread messages (e.g. 1, 2, 3). This badge stays until messages are read
3. Two-way messaging — members must be able to reply to messages and receive responses from admin. All replies must trigger push notifications in Phase 1. Twilio SMS integration comes in Phase 2
4. Two message types must be clearly distinguishable in the inbox:

- Team Messages — sent to a specific grade band group
- Admin Announcements — sent to all members/users from admin

1.6 — Standings Section (Missing)

[HIGH] Standings section is missing from both the app and admin panel

The Standings section was a required feature and is completely absent. It must be added to:

- The mobile app — accessible from the bottom navigation bar
- The admin panel — admin must be able to enter and manage standings data

Standings should be displayed by grade band and sport. The layout should be a clean table showing team name, wins, losses, and points.

1.7 — Favicon

[MEDIUM] App favicon must be updated to the YAU Superman shield logo See above

The current favicon is incorrect. Update it to the YAU Superman shield logo provided in the Google Doc.

Section 2 — Admin Panel Corrections

2.1 — Standings (Missing from Admin Panel)

[CRITICAL] Standings management is completely missing from the admin panel

Admin must be able to add, edit, and delete standings entries. Each entry should include team name, school, grade band, sport, wins, losses, and points. Changes must reflect in real time in the app.

2.2 — Schools Section — Registration Open/Closed Toggle

[HIGH] The registration open/closed toggle is not saving when editing an existing school

When editing an existing school record in the admin panel, the registration status toggle (open/closed) is not working. This must be fixed. Note: even when registration is marked as closed, members should still be able to submit — they should be placed on a waiting list. This waiting list feature can be built in Phase 2 but the toggle itself must function correctly now.

2.3 — Messages / Admin Message Center

[CRITICAL] Multiple issues in the admin messaging section

The following must be corrected in the admin Messages section:

1. Schools under Target Audience must pull from the same real-time Firestore schools collection. Any newly added school must appear immediately in the messaging target audience dropdown
2. Grade Bands under Target Audience must use these labels exactly:

- K / 1st Grade
- 2nd / 3rd Grade
- 4th / 5th Grade
- Middle School (6th, 7th, 8th Grade)

3. Sports Categories must be exactly: Flag Football, Soccer, Cheer, Basketball
4. Admin must be able to send one message to multiple groups simultaneously. Example: send to Brandywine K/1st Grade Soccer AND Allenwood 4th/5th Flag Football in a single send action. There must also be a Select All option
5. Message Center must display a list of all previously sent messages in the admin panel so the admin can review outreach history
6. Two-way messaging — admin must be able to receive and respond to member replies directly from the admin message center

2.4 — Members Section

[HIGH] Members section display order and bulk delete needed

The member list in the admin panel must display in the following order as the primary visible columns:

1. Student Name(s) — even if more than one child per parent
2. School
3. Grade Band — e.g. 2nd/3rd Grade
4. Sport(s) — e.g. Football, Soccer
5. Parent Name
6. Parent Phone Number
7. Parent Email

All additional data should be accessible on the individual student detail page. Admin must also be able to edit a member record (e.g. change grade band, school, sport assignment).

> **ACTION NEEDED:** Please bulk delete all test member accounts that were created during development and were not registered through the actual app. Only real registrations should remain.

2.5 — Game Schedule

[HIGH] Game schedule dropdowns must be real-time and grade band based

The following corrections are needed in the game schedule section:

1. Home and Away team dropdowns must pull from the schools/programs Firestore collection in real time — same as registration and messaging
2. Grade dropdown must use grade bands only: K/1st Grade, 2nd/3rd Grade, 4th/5th Grade, Middle School
3. Sports dropdown must be: Flag Football, Soccer, Cheer, Basketball
4. Add bulk delete functionality for games

Section 3 — Admin Dashboard Redesign - See YAU App Screens

> **NOTE:** The current admin dashboard does not reflect the activity and data of a live YAU program. Below are my specific recommendations for what the dashboard should display and how it should be structured.

My Recommendations for the Dashboard

The admin dashboard should be the command center — the first thing you see when you log in should tell you everything that matters right now. Here is what I recommend:

Top Row — Key Metrics (4 stat cards)

1. Total Registered Members — count of all active app registrations
2. Total Schools / Programs — number of active schools in the system
3. Messages Sent This Week — outreach activity tracker
4. Upcoming Games This Week — count of games scheduled in the next 7 days

Middle Row — Activity Feed + Quick Actions

- Recent Registrations — last 5 parents who registered through the app with name, school, sport, and time
- Recent Messages Sent — last 3 messages sent by admin with group target and timestamp
- Quick Action Buttons: Send Message, Add Game, Add School, View Members

Right Panel — Upcoming Games

- A mini schedule showing the next 3–5 games with date, teams, grade band, and sport
- Links directly to the full game schedule manager

Bottom Row — Membership Breakdown

- Members by Sport — simple bar or number breakdown: how many in Flag Football vs Soccer vs Cheer vs Basketball
- Members by Grade Band — breakdown across the 4 grade bands
- Members by School — which schools have the most registrations

This dashboard layout gives you an instant snapshot of program health every time you log in — without having to click into multiple sections. It should be clean, card-based, and load fast. No complex charts needed for Phase 1.

Section 4 — Twilio Registration - PHASE 2

Complete Twilio A2P 10DLC registration — this is blocking SMS functionality

Twilio registration must be completed before any SMS features can go live. The following compliance items must also be addressed across all registration/opt-in forms:

1. Add phone number field to the Contact Us form on youthathleteuniversity.org/contact/
2. Add unchecked SMS consent checkbox to all signup/registration flows
3. Consent language must include: 'Message and data rates may apply. Reply STOP to opt out or HELP for help.'
4. Privacy Policy and Terms of Use must be clickable links in all consent language
5. Apply same compliance changes to members.yauapp.com/signup and pickup.yauapp.com/enrollment

Please confirm: (a) all page/form updates are complete, (b) A2P 10DLC registration has been submitted, (c) provide a short summary of the use case submitted.
